ClickUp board notes

Habit Mastery League

Abubeker Mohammed and Jalen Artis

Mobile Application Development, Project 1

October 24, 2026

Our board

The board is called Habit Mastery League.

Link: https://app.clickup.com/90141776119/v/b/2kydwp7q-414

I (Abubeker, AM) have Home, Add/Edit, and the SQLite cards. Jalen (JA) have Check-In, History, Settings, and the goal helper cards.

The columns are Backlog, Ready, In progress, Review / test, and Done.

We said each person work on one task at a time. We also said we keep no more than two tasks in Review / test.

A card go to Done when the checklist on it is finished and one of us looked at the result.

The pictures we have

I was supposed to save the board on October 17, October 20, October 23, and October 27. I only saved pictures on October 16, when we were still planning the tasks. I forgot to take new pictures on the other days.

Figure 1 and Figure 2 are those October 16 pictures. They were already in our proposal. You can see the tasks in Backlog. Ready, In progress, Review / test, and Done are empty. This was before we built the app.

I opened the board again on October 24. I did not grab a picture that day, but I read the cards. Build Home and Add/Edit Habit Screens was in Done. The Check-In, History, and Settings card, the SQLite card, and the smart helper card were still sitting in Backlog. The code for those was already in the app. I just never moved the cards.

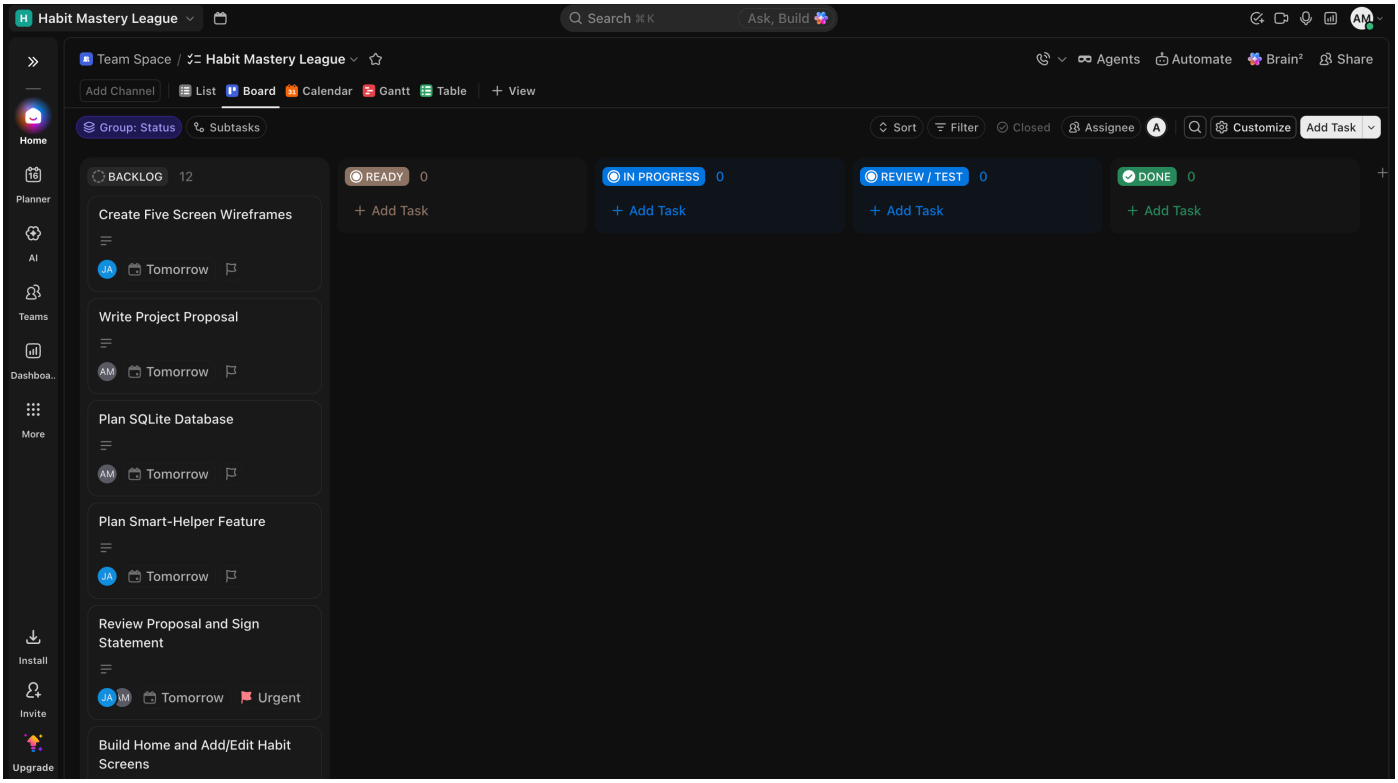

Figure 1. Our ClickUp board on October 16, 2026. This is the top of the Backlog. Done is still 0.

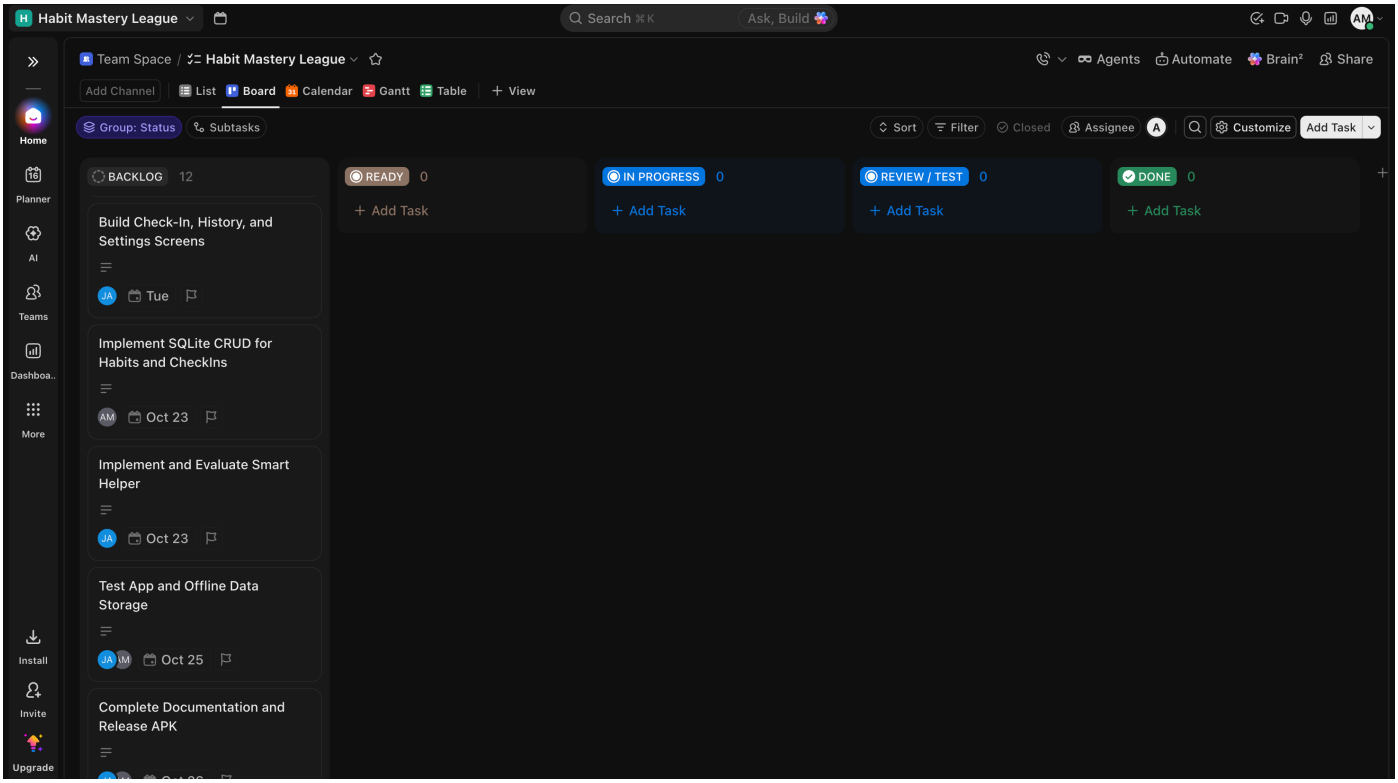

Figure 2. Same day, October 16, 2026, the rest of the Backlog. We had not started building yet.

What the cards say now

My card that did get to Done is Build Home and Add/Edit Habit Screens. The id is 86bckwhj9. I own it. The checklist say both screens work, navigation is correct, and a bad habit name show an error. On

October 24 that checklist was 1/1 and the status was Done. The files are home_screen.dart, habit_form_screen.dart, and habit_tile.dart. On my Samsung phone, an empty name do not save, and a real name show up on Home after Save.

Jalen's screen card did not get moved. It is Build Check-In, History, and Settings Screens, id 86bckwj0c. The checklist talk about the three screens, saving a check-in, and settings staying after a restart. On October 24 it was still in Backlog. The files are there anyway: checkin_screen.dart, history_screen.dart, and settings_screen.dart. Jalen ran the app on an emulator on his PC and said it worked.

The smart helper card is 86bckwkb7, and Jalen own it. It was still in Backlog on October 24. The rule is suggestNextGoal in goal_helper.dart. The tests in goal_helper_test.dart passed. I also saw the card on the phone when I edited a habit.

My SQLite card is 86bckwk0g. It was still in Backlog on October 24 too. The code is database_helper.dart. habit_delete_test.dart passed. So the coding was done, but I left the card in Backlog.

What slowed us down

My laptop only have 8 GB of RAM. VS Code, Android Studio, and the emulator all open at once made it freeze. One build just sat there until Gradle timed out, because Android Studio was still holding the project.

So I closed Android Studio and I stopped using the emulator on my laptop. I plugged in my Samsung phone instead. Jalen used an emulator on his own PC. That way we could both try the app, and my laptop did not have to run the emulator.

The part I did not keep up with is ClickUp. Some cards that were already coded never got dragged to Done. If you only look at the board, it look like we did less than what is in the app.

I own the Home, form, and database cards. Jalen own the Check-In, History, Settings, and helper cards. We both tested.
