Habit Mastery League

Abubeker Mohammed and Jalen Artis

Mobile Application Development, Project 1

Written October 24, 2026

Board

Project name: Habit Mastery League.

Board URL: https://app.clickup.com/90141776119/v/b/2kydwp7q-414

Abubeker Mohammed (AM) owns Home, Add/Edit, and the SQLite work. Jalen Artis (JA) owns Check-In, History, Settings, and the goal helper.

Columns: Backlog, Ready, In progress, Review / test, Done.

WIP limit: one task in progress for each person. No more than two tasks in Review / test.

Done means the acceptance lines on the card are checked and someone looked at the result. We did not switch to another tool. This is the real ClickUp board.

Dated pictures

The class asks for four pictures: October 17, October 20, October 23, and October 27. We do not have a separate saved picture for each of those four days. We are not backdating any picture.

Figure 1 and Figure 2 were captured on October 16, 2026. They are the planning pictures from our proposal. Every task you can read is in Backlog. Ready, In progress, Review / test, and Done are 0. This is the plan before the app was built. It is not the October 20 screen checkpoint and it is not the October 23 working-app checkpoint.

We opened the live board again on October 24, 2026. We did not save a full-board picture that day. What we read: Build Home and Add/Edit Habit Screens was in Done. The Check-In, History, and Settings card, the SQLite card, and the smart-helper card were still in Backlog, even though that code was already in the app and had been tried. October 20 and October 27 pictures were not captured.

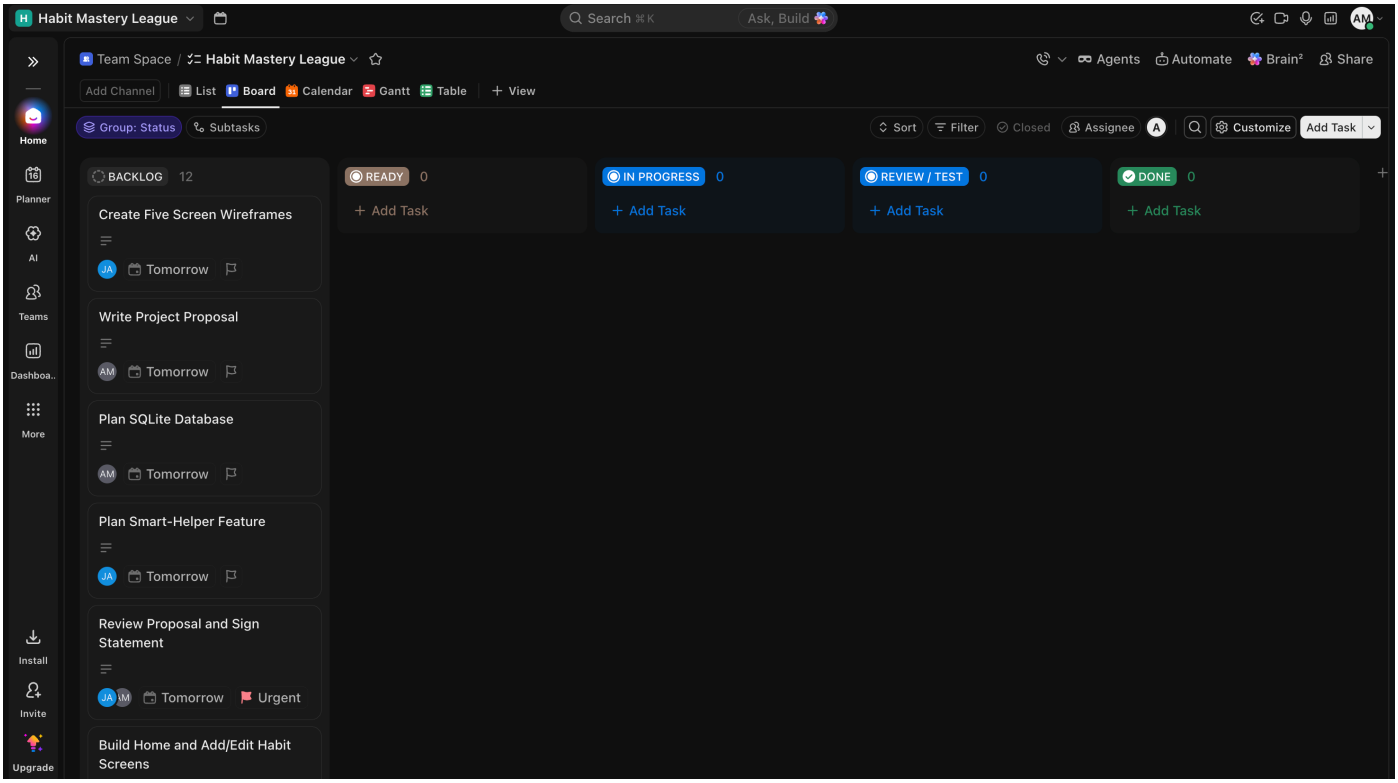

Figure 1. ClickUp board, captured October 16, 2026. Planning snapshot from the proposal. Tasks are in Backlog. Done is 0.

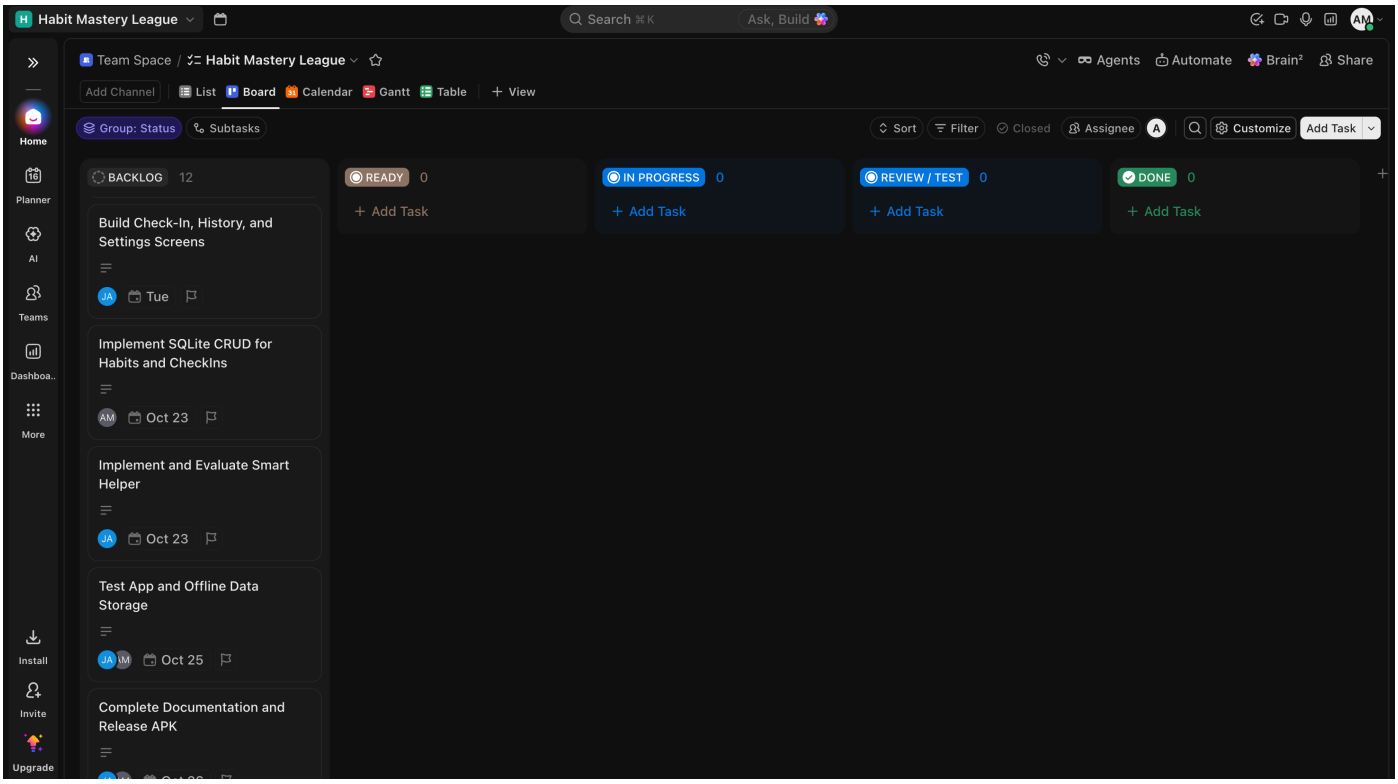

Figure 2. Same board, lower cards, captured October 16, 2026. Still planning. Not a later checkpoint.

Task traces

Abubeker, completed on the board: Build Home and Add/Edit Habit Screens. Card id 86bckwhj9. Owner

AM. Acceptance line: both screens work, navigation is correct, and invalid habit information shows an error. On October 24 the card status was Done and the checklist was 1/1. Code: lib/screens/home_screen.dart, lib/screens/habit_form_screen.dart, and lib/widgets/habit_tile.dart. The app was pushed to github.com/abubekerm1/habit_mastery_league. On the Samsung phone, an empty name does not save, and a real name shows on Home after Save.

Jalen, not marked Done on the board: Build Check-In, History, and Settings Screens. Card id 86bckwj0c. Owner JA. The acceptance lines we read were: all three screens are created, the user can record and view check-ins, and settings stay after a restart. On October 24 this card was still in Backlog. The screens are in checkin_screen.dart, history_screen.dart, and settings_screen.dart. Jalen ran the app on an emulator on his PC and said it worked. We are not calling this card Done, because the board did not say Done.

Smart helper, card 86bckwkb7, owner JA, was also still in Backlog on October 24. The rule is suggestNextGoal in lib/goal_helper.dart. test/goal_helper_test.dart passed for the five cases. The phone showed the goal card on Edit habit.

SQLite CRUD, card 86bckwk0g, owner AM, was still in Backlog on October 24. The code is database_helper.dart. test/habit_delete_test.dart passed for deleting a habit and its check-ins. The code and the test are ahead of the board.

Flow and what we changed

Blocker: Abubeker's laptop only has 8 GB of RAM. VS Code, Android Studio, and the emulator together froze the machine. One Gradle build timed out, and Android Studio was still holding the project lock.

Change: Abubeker stopped using the emulator and tested on a Samsung phone. Jalen used an emulator on his own PC, so Abubeker's laptop did not have to run one.

Result: we could open the app in two places. The limit is that ClickUp was not moved to Done for every card that was actually finished. The board makes the work look smaller than the code.

Abubeker owns the Home, form, and database cards. Jalen owns the Check-In, History, Settings, and helper cards. Both of us tested.
